DETAILED ACTION

This communication is in Applicant's response to amendment filed on Jul 28, 2003 (claims 1-2, 4-5, 7-22 and 26-32 are pending in this application).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 4-5, 7-22 and 26-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim, US. Pat. No. 6,147,682 in view of Antos, US. Pat. No. 5,790,201 (*cited in a previous office action*).

3. Claims 1, 4, 8-12, 15, 18-20, 26-27 and 31-32, Kim teaches a peripheral communications protocol hub (*a corresponding method and a computer program*) [*keyboard 12 includes an integral hub for electrically coupling a mouse 53 and a pen 52, see Fig. 8, col. 7, lines 23-25*], comprising an input device [*keyboard 12 of Fig. 8*];

Art Unit: 2182

a hub integrated the input device [*keyboard 12 includes an integral hub for electrically coupling a mouse 53 and a pen 52, see Fig. 8*].

Kim fails to teach a wireless interface coupled to the input device and operable to communicate with a host computer.

Antos teaches a wireless interface coupled to an input device [*keyboard 14 of Fig. 1*] and operable to communicate with a host computer [*CPU 24 of Fig. 1*].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Antos to have a wireless interface coupled to the input device and operable to communicate with a host computer, because it eliminates cables and enable more flexible use of the input device.

4. Claims 2, 13 and 17, Kim teaches the input device is a keyboard [*see keyboard 12 of Fig. 81*].

5. Claims 5, 14 and 29, Kim teaches the input device is a cursor control [*keyboard¹ 12 of Fig. 8*].

6. Claims 7, 16 and 30, Antos teaches the communications protocol connectors comprises a wireless connection to at least one wireless peripheral [*keyboard 14 provided with IR transmitter to enable a user to control TV 18 of Fig. 1, col. 5, lines 34-45*].

¹ Keyboards have keys dedicated to cursor control, e.g. the right, left, up and down arrow keys.

Art Unit: 2182

7. Claims 21-22 and 28, Both Kim and Antos fail to teach sending a single signal to the main computer.

however, both the concept and the advantages of multiplexing signals from a plurality of devices onto a single signal for wireless transmission is old and well known in the art.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Antos to include sending a single signal to the main computer, because it saves bandwidth along the transmission path.

Response to Arguments

9. *Applicant's arguments with respect to claims 1-2, 4-5, 7-22 and 26-32 have been considered but are moot in view of the new ground(s) of rejection.*

Conclusion

10. *Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abdelmoniem I. Elamin whose telephone number is (703) 305-3804. The examiner can normally be reached Monday through Friday from 9:30 AM to 6:00 PM.*

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Gaffin, can be reached at (703)308-3301.
